Product Innovation

Innovating for tomorrow
Investing in research & development

NGI Innovation - the Sustainable Way

Stainless steel - Recyclable materials

80% of our products can be recycled. We are working on initiatives to make this percentage even higher.

Hygienic seals - Resource saving

Permit easy cleaning and reduce water consumption.

High Quality - Longer lifetime

Our products are very high quality which means they have a longer lifetime than corresponding components.

Hygienic design - Protecting consumers

We make sure that the components do not constitute a hygiene risk through innovative and uncompromising design.

CERTIFIED HYGIENIC

HOUSES**

Bearing Houses

Innovative & Reliable

We provide the optimal solution for your application

The bearing houses are certified and designed to comply with EHEDG, 3-A and USDA rules and guidelines and are specifically designed to minimize risks of contamination and enhance food safety.

The bearing house has a patented waterproof encasement that seals the bearing blocking out dirt and bacteria as well as extending the lifetime of the bearing. The bearings are lubricated for life eliminating the risk of spreading contaminated grease during high-pressure cleaning.

The shaft insertion in to the bearing house has a new groundbreaking patented design that enables a waterproof seal to the shaft despite an installation angle of up to 3 degrees misalignment.

-  Easy installation on differently designed conveyors
-  Enhanced food safety
-  A complete hygienic design minimizing risks of cross-contamination
-  Reduce energy consumption
-  Reduce usage of water and cleaning detergents

Quote

“We are in the food processing industry where hygiene and sanitation matter most and the high-quality parts from NGL really point towards that providing our customers the possibility of an easy-clean, low maintenance, and high-durability components.

All qualities which customers in the food processing industry are looking for.”

Ulrich Krümpelmann
International Sales Manager,
Alco-food-machines GmbH & Co. KG,
Germany

Gain a competitive advantages with hygienic components

The hygienic standard of your production equipment is a crucial competitive parameter when it comes to winning an order or being authorized as a new supplier.

Scan the below QR code and watch a video from Alco-food-machines, Mr. Ulrich Krümpelmann, who explains how a component on a food processing machine can have influence on your competitiveness.

Chose NGI hygienic components due to the many features

We have interviewed one of our Italian customers in order to learn more about how our customers experience today's challenges in regard to food safety and higher hygiene. MORC2 is a machine builder and constructs and manufactures conveyors.

You can see the whole testimonial from MORC2 on our website by scanning the QR code below.

Quote

“The reasons why we chose NGI bearing houses are mainly their characteristics such as the good quality of the materials, the strength and stability. Another important feature is that they are lubrication free, which is crucial for minimizing the risk of contaminating the machinery.

NGI proves to be a reliable partner in price and performance of their products”.

Lucia Ulinici
MORC2 s.r.l.
Italy

The investment pays off

Below is a conservative example of the Return on Investment of using NGI lubrication-free bearing houses compared to lubricated bearing houses 20 EUR surcharge per bearing house for 400 units and lubrication every two weeks.

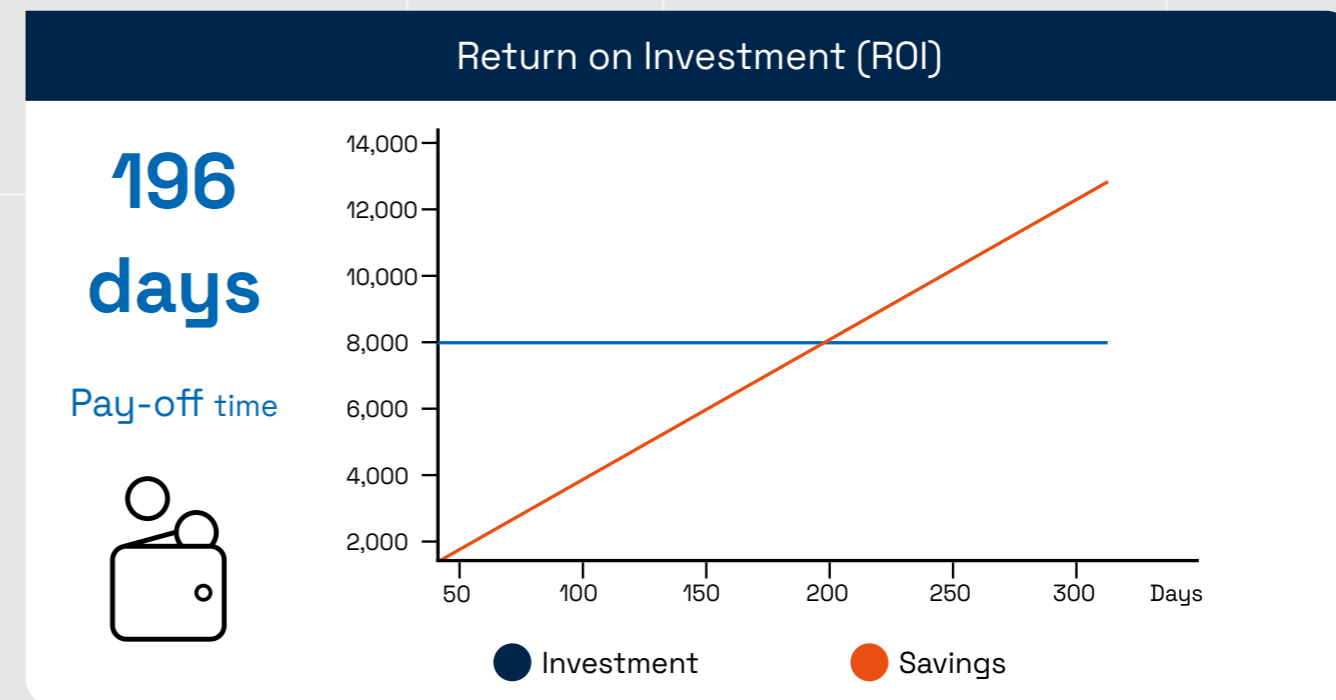

Please note that the surcharge will rarely be 20 EUR, and most end-users lubricate more frequently than every two weeks.

The investment	
Surcharge per bearing house [EUR]	20
Number of bearing houses [quantity]	400
Total extra investment (competitor vs. NGI) [EUR]	8,000
The cost savings related to lubrication	
Amount of grease per lubrication [kg]	0,015
Number of lubrications per year [quantity]	26
Cost of grease per kg [EUR]	40
Total costs for grease per year [EUR]	6,240
Cost per man hour [EUR]	25
Time for each lubrication [Minutes]	2
Cost of manpower per year [EUR]	8,667
Total lubrication costs [EUR]	14,907

186% ROI after one year

The savings	
Total investment (competitor vs. NGI) [EUR]	8,000
Savings of lubrication costs [EUR]	14,907
Profit after 12 months [EUR]	6,907
Pay-back after 12 months [%]	186%
Return on Investment [time]	196 days

Hygiene will save your customer money

Sustainability and reduced risk of bearing failure

- 2/3 of bearing failures are caused by lack of or faulty lubrication. Since the NGI bearings are lubrication-free, the risk of failure is considerably reduced.
- The hygienic design contributes to reducing the emission of water and detergents in the cleaning process thus reducing the environmental impact.
- The lubrication-free bearings eliminate the emission of grease spreading from the bearing to both wastewater and to other parts of the production environment.

Specific market consultants

Invitation to innovation
Investing in knowledge-sharing

Locally based Area Sales Managers

Gain a competitive advantage with hygienic components

NGI has grown to become the global market leader for hygienic components due to our continuously high involvement in our customer's businesses and needs.

Our deep insight into the various sectors within the machine manufacturing and food processing industries makes us a value-adding partner with focus on consulting and knowledge sharing.

Today, NGI is represented in more than 50 countries and is rapidly expanding. As an NGI customer you will always be able to talk to a country-specific consultant with local language skills.

Certified hygienic Bearing houses

The only patented bearing house in the world hygienically designed and certified by EHEDG, 3-A and USDA standards with extreme easy access for cleaning from all angles.

The bearing house provide a patented waterproof sealing that allows 3 degrees misalignment and can be equipped with a high-performance ceramic bearing lubricated for life with 4-8 times extended lifetime

- X-Ray detectable
- Innovation by NIGI
- Reduce costs
- Enhanced food safety
- Plug & play installation
- Reduce energy

- Certified hygienic
- Minimized cleaning time
- Minimized water usage

reddot winner 2022

Certified hygienic Bearing houses with spacers

-  Certified hygienic
-  Minimized cleaning time
-  Minimized water usage

Easy cleaning from all angles

NGI has created a bearing house that is extremely easy to clean from all angles as water can easily reach all surfaces. All transitions and connections between materials are hygienically sealed with blue sealings.

Hygienic spacers

A high focus on hygienic design ensures that the bearing house can be cleaned behind and around the shaft and furthermore, NGI offers hygienic spacers to increase the distance to machines and equipment to over an inch as recommended by USDA.

Installation

Installation is easy and you will be able to use your usual procedure, however, as the bearing can be turned inside the house and covers are replaceable, the bearing house from NGI is far more flexible and can be mounted in more ways than traditional bearing houses.

Certified hygienic Bearing houses

NGI is the only manufacturer in the world of certified hygienic bearing houses designed to comply and certified by EHEDG, 3-A and USDA standards. The product group consists of five different types of bearing houses fitted with ceramic or as standard stainless steel bearings. The bearing houses are designed according to ISO3228_2013 and fit insert bearings that meet ISO9628_2006. This also applies to outside dimensions and it is therefore, a perfect hygienic substitution for an unhygienic solution.

Choosing bearing houses from NGI optimized with ceramic spherical ball bearings you will be able to reach optimal quality, robustness and stability. The bearing houses are lubrication free which minimizes maintenance and the need for grease, thereby, minimizing the risk of contaminating the product. Our bearing houses are IP69K-certified.

Product Group Features

- Easy access for cleaning from all angles
- Flexible mounting - can accommodate initial misalignment
- Fitted with stainless steel bearing or ceramic bearing.
- Tested and conforms to ISO9628_2006 & ISO3228_2013
- Can be supplied with hygienic bolts and nuts as standard. More sizes available upon request.
- Can accommodate temperatures -20°C to +110°C depending on insert bearing
- Unique patented seal system, waterproof at more than 3° misalignment
- Produced in sturdy grilamid with co-moulded FDA-approved TPS seals
- The housing is able to withstand the same dynamic and static radial load as insert bearings
- Housing made from grilamid, a high strength High-performance PA12 and optimized for detection in the food and pharmaceutical industries
- Suitable for heavier or alternating axial load depending on the way it is locked onto the shaft
- For further information on load capacities look at bearing data sheet or contact NGI

XB2FC

Special Features

- 2-hole flange bearing house
- Mounted parallel to shaft direction
- Shaft diameter 20 mm - 40 mm
- Can be supplied with certified hygienic nuts and bolts for maximum hygienic safety

21

XBPBC

Special Features

- Pillow block bearing house
- Mounted perpendicularly to shaft direction
- Shaft diameter 20 mm - 35 mm
- Can be supplied with certified hygienic nuts and bolts for maximum hygienic safety

27

XB3FC

Special Features

- 3-hole flange bearing house
- Mounted parallel to shaft direction
- Shaft diameter 20 mm - 30 mm
- Can be supplied with certified hygienic nuts and bolts for maximum hygienic safety

23

XBTBC

Special Features

- Tapped base bearing house
- Mounted perpendicularly to shaft direction
- Shaft diameter 25 mm
- Can be supplied with certified hygienic nuts and bolts for maximum hygienic safety

29

XB4FC

Special Features

- 4-hole flange bearing house
- Mounted parallel to shaft direction
- Shaft diameter 20 mm - 40 mm
- Can be supplied with certified hygienic nuts and bolts for maximum hygienic safety

25

Declaration of conformity

This declaration of conformity lists all the directives and standards that NGI adheres to. This ensures that products from NGI are always in compliance with currently valid requirements.

39

Certified hygienic Bearing houses - XB2FC

- Certified hygienic
- Minimized cleaning time
- Minimized water usage

The design and patent protected XB2FC 2-hole flange bearing house is the optimal choice for machinery and equipment that has to comply with strict hygiene requirements.

The XB2FC bearing house is mounted parallel to shaft direction

The XB2FC is designed to provide easy access for cleaning from all angles. We recommend that you choose a bearing house with NGI's hygienic nuts and bolts for maximum hygienic safety.

The XB2FC meets the requirements of EC 1935/2004, EC 10/2011, EC 2023/2006 and FDA.

Nut and Bolt

Our bearing houses can be supplied with certified hygienic bolts and nuts. More bolt lengths are available. Find the relevant assortment of bolts and nuts for bearing houses on page 29.

Color bearing house

Color	Color code
WHITE	(W)
BLUE	(B)
BLACK	(S)

* The hygienic bearing house is typically used on conveyors rotating at relatively low speeds (below 2000 rpm), the housing creates a hygienic environment for the bearing, and it would be optimal to mount it on an AISI hard surface between 0.8 µm Ra with a tolerance not exceeding h9, preferably lower.

Misalignment angle = +/-3°

Hygienic Bearings stainless steel or ceramic hybrid

-  Certified hygienic
-  Minimized cleaning time
-  Minimized water usage

We produce stainless steel and ceramic hybrid high performance insert bearings of the highest quality. Seals are made from FDA blue NBR.

Research based on the analysis of 1.000 bearings shows that 99,6% of ceramic bearings last at least 4 times longer than standard bearings.

In 50% of the cases, the service life of the bearing was between 8-20 times longer than the bearings they replaced.

In 30% of the cases, it is expected that the ceramic bearings will never need to be replaced for the entire service life of the machine.

- Hybrid with ceramic balls
- AISI 440 rings
- Eccentric locking collar

Hygienic Bearings stainless steel or ceramic hybrid

- Certified hygienic
- Minimized cleaning time
- Minimized water usage

Our bearings are pre-installed in the bearing houses and we currently offer 4 types - stainless steel or ceramic hybrid bearing with screws or locking collar.

Our certified hygienic bearing houses with IP69K sealing provide the ideal environment for the bearing and are therefore suitable for maintenance-free operation.

The main operating parameters that determine the lifetime of the bearing are bearing type and size, load, speed, operating temperature, shaft tolerances.

Our ball bearings are greased-for-life with high-performance multi-purpose grease designed specifically for the lubrication of food processing machinery all sealed-for-life by seals made from FDA-approved blue NBR.

The locking method with screws is the most common locking function.

Bearings with an eccentric locking collar are intended primarily for use in applications where the direction of rotation is constant. On one side of the bearing inner ring is an eccentric extension that fits the locking collar.

Grease for bearing balls in stainless steel:

Our bearing balls in stainless steel are lubricated-for-life with Mobilgrease FM 222 a high performance multi-purpose products designed specifically for the lubrication of food processing machinery. FM 222 are Agriculture and Agri-Food Canada category n lubricant (incidental food contact) and are formulated with components meeting the requirements of CFR 178.3570, Chapter 21, and NSF registered as H1 classified lubricants. DIN 51825 KPF2K-20 - Kosher/Parve -Halal.

Grease for bearing balls in ceramic hybrid:

Our bearing ball in ceramic hybrid are lubricated-for-life with ROCOL® FOODLUBE Premier 1 a soft, white, non-toxic lubricant containing PTFE for the effective lubrication and protection of ball, roller and plain bearings, slides and bushes particularly those operating in food, pharmaceutical and other clean environments. FOODLUBE Premier 1 is temperature resistance of -20°C to +180°C and it is manufactured from only FDA listed ingredients: FDA Group 21 CFR 178.3570. FOODLUBE Premier 1 is NSF registered, NSF H1 registered - 141084 and ISO 21469 certified.

* The hygienic bearing house is typically used on conveyors rotating at relatively low speeds (below 2000 rpm), the housing creates a hygienic environment for the bearing, and it would be optimal to mount it on an AISI hard surface between 0,8 µm and 1,6 Ram Ra with a tolerance not exceeding h9, preferably lower.

Certified hygienic bolts & nuts

-  Certified hygienic
-  Minimized cleaning time
-  Minimized water usage

NGI is able to offer certified hygienic bolts and nuts with blue NBR rubber seals. The NBR rubber seal blocks out water and bacteria and also prevents a non-hygienic metal-to-metal assembly.

The bolts and nuts have self-draining surfaces with a maximal roughness of 0.8 µm Ra. The design of the bolts and nuts does not deviate from the sizes of current standard bolts and nuts. Therefore, wrench sizes, thread heights etc. all remains the same making it very easy to upgrade and replace standard bolts.

This is the right choice of accessories to be used on all machinery in all certified hygienic wash-down environments.

- Certified in accordance with 3-A (RPSCQC)
- Certified in accordance with EHEDG hygienic standard TYPE EL - CLASS I AUX
- Minimizes cleaning time and water consumption
- Surfaces with a maximal roughness of 0,8 µm Ra
- Available in sizes M5-M24

* Bearing can be supplied with certified hygienic bolts. More bolt lengths are available, contact NGI for other options.

Certified hygienic spacers

-  Certified hygienic
-  Minimized cleaning time
-  Minimized water usage

NGI can offer certified hygienic spacers with blue NBR rubber seals. The NBR rubber seal blocks out water and bacteria and prevents a non-hygienic metal-to-metal assembly.

A high focus on hygienic design ensures that the bearing house can be cleaned behind and around the shaft and furthermore, NGI offers hygienic spacers to increase the distance to machines and equipments to over an inch as recommended by USDA.

NGI bearing houses are USDA certified.

When USDA laws are to be followed use the hygienic spacers from NGI to secure the approved distance to the support surface. For hygienic components from NGI which are already 3-A RPSCQC approved, USDA has mostly been about protection against visible threads and 1" spacers for bearing housings.

To attach NGI hygienic bearing houses to the support surface always use NGI certified hygienic bolts or nuts to secure the overall hygienic design.

A safer and more effective cleaning of your equipment?

- try our CIP Unit!

The new easy-to-fit hygienic CIP unit is a simple and efficient solution, where nozzles are positioned on the two spray bars. This is to effectively remove the accumulated organic residues from both sides of a process and conveyor belting.

The CIP unit can easily be installed with no use of complicated engineering and conveyor frame modifications. The device is highly efficient, hygienically designed, and makes cleaning more environmentally friendly.

The installation of the new CIP unit minimizes the operator's manual cleaning and contributes to reduce the resource utilization such as water, labor and detergents. See more at www.ngi-global.com

- Reduce the cleaning time and manual labor and increase your production time
- Reduce the consumption of water, chemicals and energy
- Minimize the wear on conveyor belt surfaces by avoiding manual cleaning
- Low maintenance and service required
- State-of-the-art hygienic design. Inspired by EHEDG and 3-A design guidelines
